Web Design and Development

Design and development of a classic, minimalist website theme for WordPress to present personal information, publications (books) with description, cover image, and data optimized for human visitors, search engines (SEO), and AI agents (GEO via metadata) including up to three artwork images or photographs. The website is suitable to display on desktop browsers and mobile devices.

Content (text, images, audio) can be edited and expanded by the client via WordPress, without programming knowledge.

Example content: intro page, contact, imprint and legal information,
at least two books pages, at least one blog post as a template,
in English only (additional languages are technically possible).

WordPress / server setup and going live.

Introduction/training session: how to add and edit content

Result: fully functional website, ready for DIY editing

Optionally, enter content: pages for all books published so far (ca. 30 - 45 books).
